All.

I had an old action item from 2004, to develop an XML cv format that the
NMRA, mfg and software developers cuydl use as a standard.

First, no excuse, for not having it done (I'll fall on my sword), so
don't beat me up about it. I guess it finally raised its level in the
queue:-)

I am posting this question as an activity to figure out the best way to
proceed.

  - KAM has a format that we use for our Decoder Commander.
  - JMRI folks have a format that they use for decoder pro.

Does this make sense to merge the two together to create a NMRA document
that defines what the format should be, that way we can all use the same
data format?

This way the data format would be owned by the NMRA.

Let me know your thoughts.
